

# Ideogram AI Image Prompt

Aurora Night Portrait — Realistic Photography Style

---

## Full Prompt

A highly realistic nighttime photograph of a young woman standing alone in a vast open natural landscape, seen from behind, quietly looking up at the night sky. She has natural long hair gently moving in the cold night breeze and wears a simple dark jacket and long skirt, with realistic fabric texture and natural proportions.

Above her is a breathtaking but scientifically believable Northern Lights display, with soft emerald green and subtle cyan aurora curtains naturally stretching across the sky. The aurora is delicate and atmospheric rather than exaggerated, with realistic variations in brightness and natural edges.

The sky is exceptionally clear and filled with thousands of realistic stars, with a subtle visible Milky Way behind the aurora. A few thin clouds are naturally illuminated by the aurora.

The landscape is a remote peaceful countryside with realistic grass, small rocks, and uneven natural ground. Add a few distant warm amber lights from a very small cabin or campsite far in the background, creating a subtle warm-vs-cool contrast. The lights should be dim and realistic, not glowing excessively.

Natural moonlight and aurora light gently illuminate the surroundings and create a subtle rim light around the girl's hair and shoulders. Realistic shadows, natural reflections, physically accurate lighting, realistic atmospheric haze, authentic night exposure.

Shot like a professional full-frame mirrorless camera photograph, 24mm wide-angle lens, f/2.8, ISO 1600, long exposure astrophotography, realistic depth of field, natural lens characteristics, subtle film grain, accurate white balance, high dynamic range, detailed textures, realistic skin and hair, true-to-life colors, cinematic but natural color grading, documentary photography aesthetic, ultra-photorealistic, extremely realistic, 8K photographic detail.

The composition should feel like an actual photograph captured in Iceland, Norway, or Finland on a clear winter night. The woman should look naturally integrated into the environment, not digitally pasted into the scene.

## Negative Prompt / Exclusions

No fantasy landscape, no artificial-looking aurora, no exaggerated neon colors, no excessive glow, no overprocessed HDR, no plastic skin, no CGI appearance, no illustration, no anime, no cartoon, no extra people, no distorted anatomy, no text, no watermark, no logo.

## **Suggested Ideogram AI Settings**

Style: Realistic / Photo | Aspect Ratio: 16:9 or 3:2 (wide landscape) | Rendering: Highest quality / Detail-focused mode if available.
